

# SECURITY

## Built for Your Enterprise

A safer, more secure enterprise starts with award-winning security products that delivers tightly integrated innovations and comprehensive protection.

### STRATEGY

We can conduct security assessments of your organization to provide you with vital insight into the overall security of your IT environment. Our security specialists possess knowledge of current threats and the latest measures you can take to prevent them.

### AUDITS

We conduct a thorough audit of your systems and processes with complete reporting. Recommendations are made based on the findings, with guidance provided on the next steps leading toward the implementation of security measures.

### ENTERPRISE

Applying proven risk-based industry practices, Affinity Consultants support enterprises with their cyber transformation journey. We develop strategies, roadmaps, and recommendations that apply recognized governance, technical solutions, and architectures for mitigating cyber exposures.

## ENTERPRISE SOLUTIONS

Securing your enterprise requires the right protection in the right place.

### Firewalls

**Simplify and strengthen your security with our prevention-focused architecture** that's easy to deploy and operate—and incredibly effective. No matter where you need protection, our Next-Generation Firewalls are architected to provide consistent protection to your entire network perimeter—from your headquarters and office campus, branch offices and data center to your mobile and remote workforce.

### Cloud

**The modern enterprise requires cloud native security.** The move to the cloud has changed all aspects of the application development lifecycle – security being foremost among them. Security and DevOps teams face a growing number of entities to secure as the organization adopts cloud native approaches. Ever-changing environments challenge developers to build and deploy at a frantic pace, while security teams remain responsible for the protection and compliance of the entire lifecycle

### Future

**Fewer alerts, end-to-end automation, smarter security operations.** We deploy the industry's most comprehensive product suite for security operations tools empowering enterprises with the best-in-class detection, investigation, automation and response capabilities.
